YEAR BY YEAR RETURNS

INVESTMENT TERMS

12b-1 Fee is an annual fee charged by some mutual funds to pay for marketing and distribution activities.

Basis Point is 1/100th of 1%. Changes in interest rates or yields are commonly expressed in basis points. For example, an increase of 30 basis points equals 0.30%.

Benchmark is an unmanaged group of securities whose overall performance is used as a standard to measure investment performance.

Beta is a measure of the magnitude of a portfolio's past share-price fluctuations in relation to the ups and downs of the overall market. The market is assigned a beta of 1.00, so a portfolio with a beta of 1.20 would have seen its share price rise or fall by 12% when the overall market rose or fell by 10%.

Bond is a debt security (IOU) issued by a corporation, government, or government agency in exchange for the money the bondholder lends it. In most instances, the issuer agrees to pay back the loan by a specific date and make regular interest payments until that date.

Collective Investment Trust is a trust fund maintained by a bank exclusively for the collective investment of assets from several trust accounts administered by a trust department. CTFs are not available to the general investing public.

Diversification is the strategy of investing in different asset classes and among the securities of many issuers in an attempt to lower overall investment risk.

Dividend is either the distribution of the interest or income produced by a mutual fund's holdings to the fund's shareholders, or a payment of cash or stock from a company's earnings to each stockholder.

Equity, or ownership in a company, is often used as a synonym for stock.

Expense Ratio is a mutual fund's operating expense expressed as a percentage of average net assets. The expense ratio directly reduces returns to shareholders.

Fixed Income refers to investments, such as bonds, that have specific interest rates.

Index is an unmanaged group of securities whose overall performance is used as a benchmark. An index may be broad or focus on one sector or type of security.

Index Fund is a type of mutual fund that seeks to "track" the performance of a particular market index by buying and holding all or a representative sample of the securities that appear in the index, in the same proportions as their index weightings.

Mutual Fund is an investment company that pools the money of many shareholders and invests it in a variety of securities. The fund is professionally managed by an investment company in an effort to achieve a specific investment objective.

Standard Deviation is a measure of the degree to which a fund's return varies from its previous returns or from the average of all similar funds. The larger the standard deviation, the greater the likelihood (and risk) that a security's performance will fluctuate from the average return.

Stock is a security that represents part ownership, or equity, in a corporation. Each share of stock is a proportional stake in the corporation's assets and profits, some of which could be paid out as dividends.
